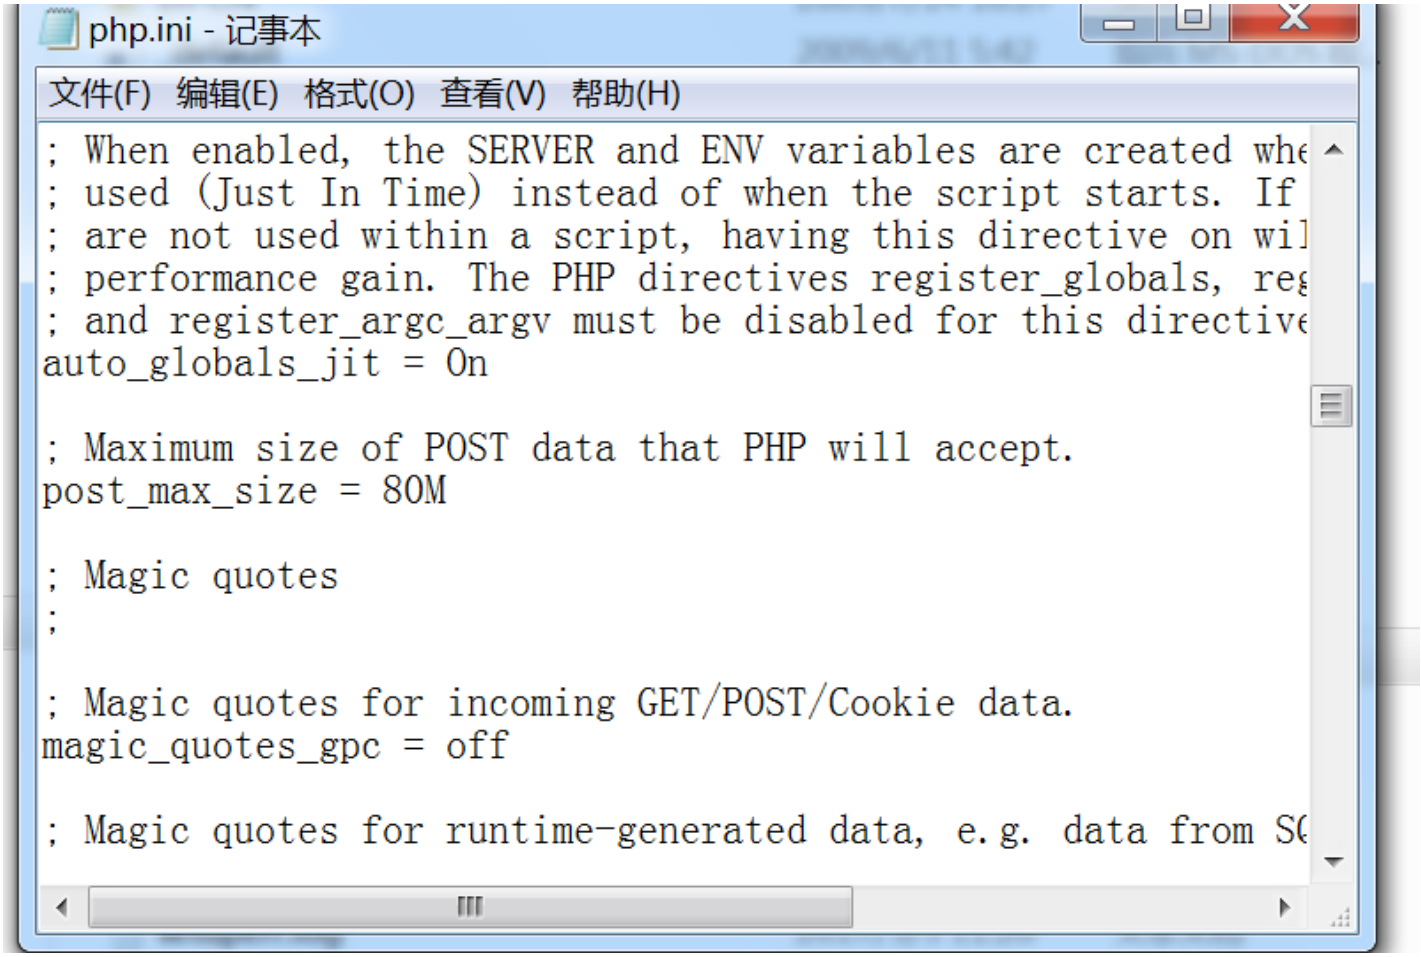
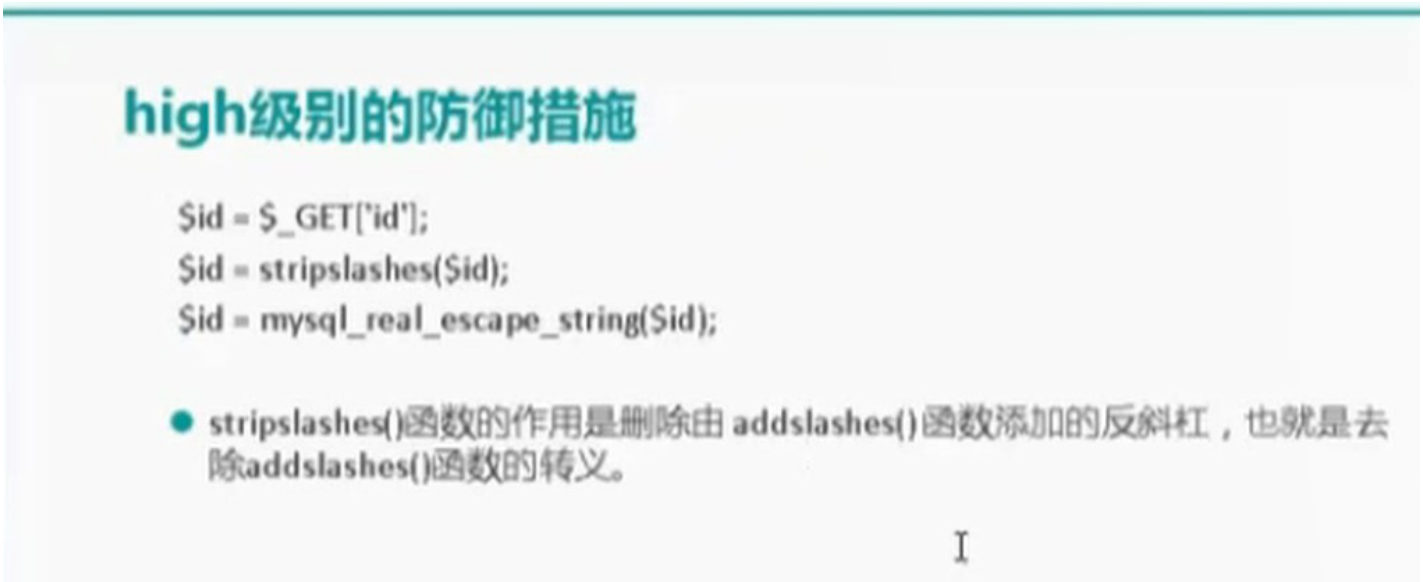
开启魔术引导(一般不建议采用,可能会造成可移植方面的 问题)之后，可以对所有的GET,POST和COOKIE传值的数据自动运行addslashes()函数;

关闭魔术引导:

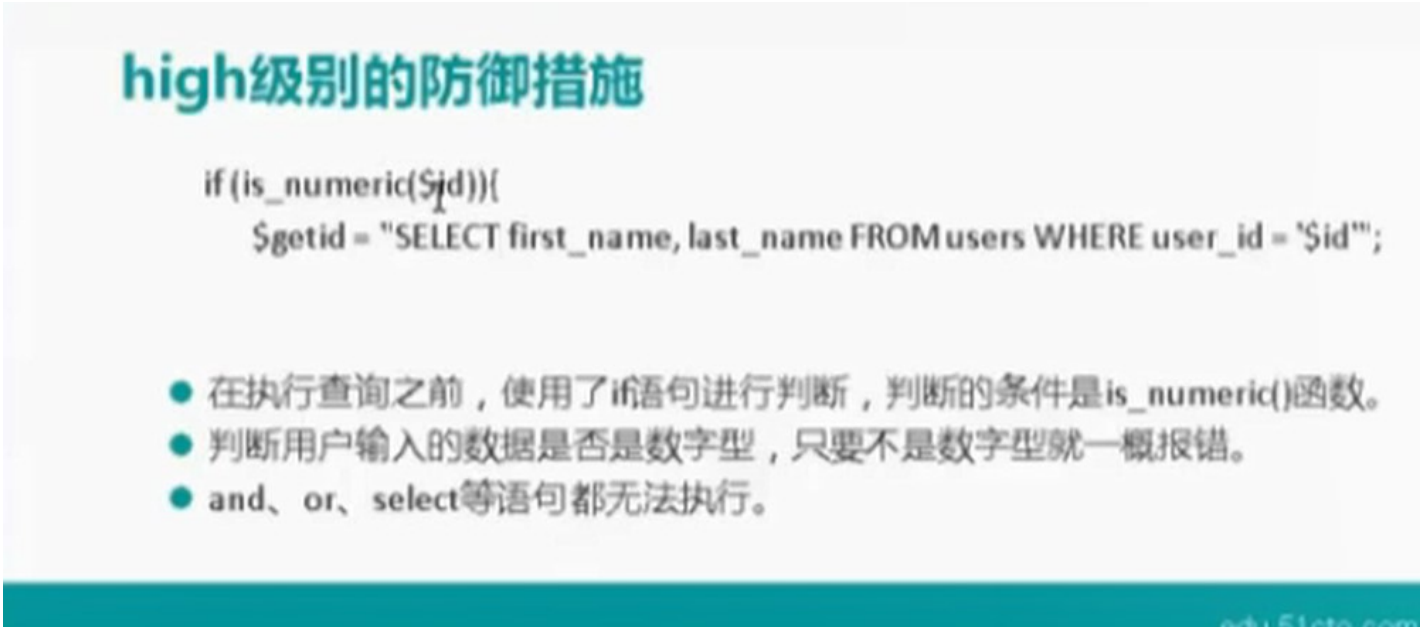


high级别下的防御措施:

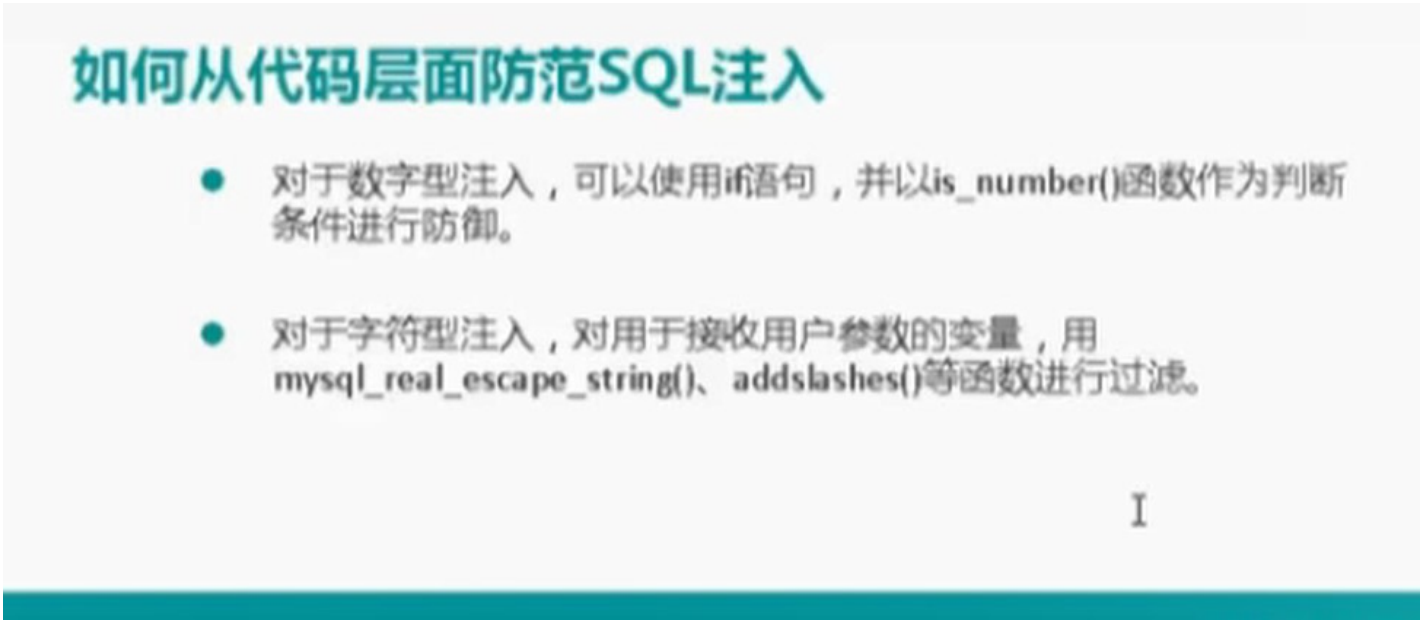


2利用is_numeric()函数判断你输入的 是不是 数字，如果输入的不是字符就不会往下执行!

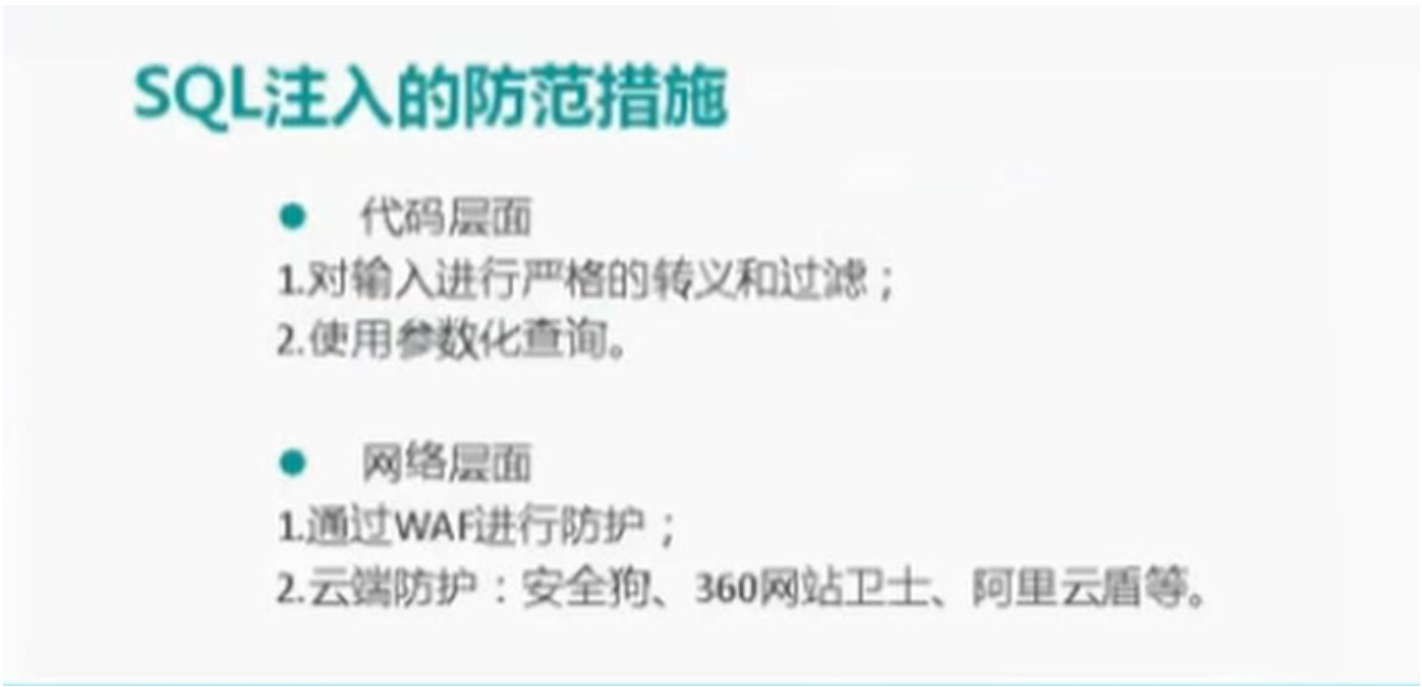
3.把你输入的数据放于单引号内,作为一个字符型



如何防御:



字符型注入里面最关键的就是单引号,怎么闭合单引号,你把单引号转义了,字符型注入就不存在了;



在WAF里面主要做过滤!云端防护也一样的原理!
